

Synthetic Fixture

This tiny document exists only to exercise the conversion pipeline. It contains one display equation and one table so the integration test can assert that the converter produces at least one `FORMULA` node and at least one table node.

The Gaussian integral has the well-known closed form shown below:

$$\int_{-\infty}^{\infty} e^{-\alpha x^2} dx = \sqrt{\frac{\pi}{\alpha}}, \qquad \alpha > 0. \tag{1}$$

Table ?? reports a few synthetic measurements.

Method	Accuracy	Time (s)
Baseline	0.71	12.4
Improved	0.84	15.9
Proposed	0.92	11.2

Table 1: Synthetic results for the test fixture.
